Identification

Identification ( 2 )

**Forced-Identification Users**

These users will be forced to authenticate themselves whenever they log on to a monitored server ( 2 )

1 - 0 of 0

1

Domain Name	Login	Manage	Delete
-------------	-------	--------	--------

**Users For Secondary Identification :**

**Active Directory Identification Targets**

These are the Active Directory Targets against which the users will authenticate ( 2 )

**Active Directory Groups**

**Note:** Active Directory groups are only available when using an Automatic LDAP Target.

**Enable:** all groups from this Active Directory domain.

To exclude any group from being able to log-on, please enter the Active Directory group name (i.e "Help Desk" or "Domain Admins"). You can add multiple groups to this list.

Exclude: Group  \

Domain/Group	Created Date

**Disable** all groups from this Active Directory domain

To enable specific groups from this domain to log-on, please enter the Active Directory group name (i.e "Help Desk" or "Domain Admins"). You can add multiple groups to this list.

LDAP Settings

Authentication Configuration

Manual LDAP Target

Manual LDAP targets can be used to authenticate users for 2 purposes: Console Users and Identification Services.

Type in the correct LDAP path by using the following example:

LDAP://Domain\_Controller\_Name\_or\_IP/DC=Domain\_Name.DC=Suffix  
(for example, if your Domain Controller name is OBS-DC1, and your domain name is OBSERVEIT-SYS.LOCAL, then use the following LDAP path:LDAP://OBS-DC1/DC=OBSERVEIT-SYS.DC=LOCAL)

Note: If no name resolution is possible, you might need to enter the Domain Controller IP address instead.

LDAP Path

Enter user credentials to verify the LDAP path

User Name

Password

Add & Verify

Automatic LDAP Target

Note: Clicking on the "Detect Domain Controller" button will first detect if the ObserveIT Application server belongs to an Active Directory domain. If true, an automatic-type LDAP path will be added to the LDAP List below.

Only automatic-type ("Auto") domains can be used for Active Directory Groups.

Detect Domain Membership

### Like a Security Camera on Your Servers!

Keep a close eye on remote users and 3rd party vendors to satisfy PCI, HIPAA, ISO 27001 and SOX security compliance requirements.

- Capture video and text recordings of every user action.
- No more crawling through arcane system log files.
- No more guessing 'What caused this change on our network?'
- If you want to know what users were doing, ObserveIT shows you exactly what they were doing!
